English (Full Professional Proficiency)

PROFESSIONAL EXPERIENCE

- 09/2017 – Present | Bell Canada (Technology Services - TS)**
Senior Manager, Application Architecture & Enterprise Delivery
 - Primary technology partner for **Bell Business Markets (BBM)**: directing a multidisciplinary team of ~20 architects, developers, Scrum Masters, Product Owners, and QA specialists delivering critical platforms.
 - Orchestrate multiple Agile squads across the entire SDLC, tightly aligning architectural roadmaps, release governance, and 24/7 operations with corporate priorities.
 - Formulate architecture recommendations and evaluate solution feasibility, scalability, financial cost-benefit, and governance standards.
 - Manage multimillion-dollar OPEX/CAPEX operating budgets, workforce allocation, and strategic delivery commitments.
 - Spearhead the resolution of critical production incidents and improve system reliability and operational resilience.
 - Established cross-functional collaboration frameworks that reduced dependencies, eliminated rework, and accelerated time-to-market.
 - Pioneered the adoption of generative AI tooling and CI/CD automation to increase developer velocity and software quality.
- 02/2014 – 09/2017 | Bell Canada**
Senior Business Analyst – Systems & Enterprise Architecture
 - Led business analysis and systems elicitation for major enterprise-wide technology projects.
 - Served as principal reviewer for IBM Maximo solution design, software architecture, and functional validation.
 - Supported enterprise deployment and upgrades across Maximo versions 6, 7.2, and 7.5, including TSRM, CCMD, and TAMIT.
- 02/2011 – 02/2014 | Bell Canada**
Systems Business Analyst – Managed Services
 - Gathered and formulated complex system requirements for extensive Managed Services client engagements.
 - Validated alignment between technical design and functional specifications; spearheaded system integration and operational readiness.
- 08/2007 – 02/2011 | IBM**
Software Developer / Solutions Engineer
 - Developed advanced automated inspection systems and computer vision algorithms for semiconductor manufacturing plants.
 - Managed end-to-end development cycle from requirements gathering and algorithmic design through industrial deployment.
 - Resolved high-complexity technical defects utilizing structured 8-step (8D) root cause analysis methodology.

CORE COMPETENCIES & EXPERTISE

- Digital Transformation
- Operational Governance & ITSM
- Generative AI Integration
- Agile, Scrum & SAFe Delivery
- Budgeting & Vendor Management
- Stakeholder Management
