Customer Experience & Technology Leadership
Bell Canada
Montreal, Quebec

Re: Application for Senior Manager, ServiceNow Platform Delivery & Transformation (Req Id: 432892)

Dear Hiring Committee and ServiceNow Leadership,

As a current **Senior Manager within Technology Services (TS) at Bell Canada** with **15 years of demonstrated tenure within the organization** (since 2011, and 18+ years in total software engineering and enterprise platform delivery), I am writing to express my strong enthusiasm for the role of Senior Manager, ServiceNow Platform Delivery and Transformation within the Customer Experience team.

Throughout my 15-year career at Bell, my primary internal business client and partner has consistently been **Bell Business Markets (BBM)**. Since September 2017, I have led a multidisciplinary team of **~20 talented professionals** (product managers, architects, software engineers, Scrum Masters, analysts, and vendor delivery partners). My day-to-day focus directly centers on delivering complex technology roadmaps tailored to BBM's strategic priorities, stewarding OPEX/CAPEX platform investments, resolving enterprise delivery dependencies, and establishing robust governance practices that ensure 24/7 resilience across mission-critical services.

This strategic mandate within the **ServiceNow Center of Excellence (CoE)**, centered on customer experience and enterprise delivery, strongly aligns with my core capabilities:

• Longstanding BBM Partnership & Telecoms

Intimate knowledge of Bell Business Markets (BBM) operations, managed services workflows, and enterprise customer requirements.

• Executive Advisory & Stakeholder Trust

Regularly present business cases, strategic roadmaps, risk profiles, and scorecards to executive steering committees with clarity and conviction.

• ITSM Transformation & Enterprise Systems

Comprehensive expertise in IT service management (ITSM, ITIL, Maximo, ICD), platform governance, and 24/7 carrier-grade resilience at Bell.

• AI-Assisted Innovation & Automation

Active proponent of leveraging generative AI (AI Agents, workflow engineering) and CI/CD automation to maximize operational efficiency.

Holding an engineering degree from École de technologie supérieure (ÉTS) in Automated Production Engineering—complemented by solid university studies in Software Engineering and a Diploma in Computer Science—I bridge deep technical grounding with seasoned executive leadership. My 15-year tenure in Technology Services (TS) and trusted relationship with **Bell Business Markets (BBM)** leadership will allow me to be immediately operational and accelerate value creation from Bell's ServiceNow investments.

I would welcome the opportunity to discuss how my leadership, domain insight, and passion for continuous innovation will accelerate the ServiceNow Center of Excellence's strategic objectives.

Thank you for your time, consideration, and ongoing dedication to #TeamBell.

Félix-Antoine Legault, B. Eng.
Senior Manager, Bell Canada
